

1 **WHAT IS CLAIMED IS:**

2 1. A detachable folding clotheshorse comprising:

3 a seat with a top side, a bottom side and an outer periphery, the seat
4 having a plurality of slots defined through the seat from the top side to the
5 bottom, and each slot having a notch defined at the outer periphery, a supporting
6 edge formed beneath the notch, and at least one protrusion formed at an inner
7 wall of the slot adjacent the notch; and

8 a plurality of arms respectively and pivotally mounted in the slots, each
9 arm having at least one channel longitudinally defined at a side facing the at least
10 one protrusion for receiving the protrusion and at least one opening defined at a
11 top-rear end of the channel for access of the protrusion to the channel.

12 2. The detachable folding clotheshorse as claimed in claim 1, wherein
13 the slot has two protrusions respectively formed at two opposed inner walls
14 adjacent the notch, and the arm has two channels defined at two opposed sides
15 and two openings defined at the top-rear ends of the respective channels.

16 3. The detachable folding clotheshorse as claimed in claim 1, wherein
17 the arm has a stop formed at a middle portion of the at least one channel.

18 4. The detachable folding clotheshorse as claimed in claim 3, wherein
19 the arm has two clips formed at a top side of the arm and respectively at a front
20 end and a rear end of the arm.

21 5. The detachable folding clotheshorse as claimed in claim 3, wherein
22 the arm has a ring formed at a front end of the arm.

23 6. The detachable folding clotheshorse as claimed in claim 3, wherein
24 the seat is secured on a tube, and the tube has an adjusting connector provided at

1 a lower end of the tube.

2 7. The detachable folding clotheshorse as claimed in claim 3, wherein
3 the seat has a semi-circular cross section, and the slots are separately defined and
4 arranged along radial direction of the seat.
